

An ongoing to commitment to open source drives momentum

## Azure supports leading open source technologies

Azure maintains support for the current major version and the two prior major versions of open source database engines.

Azure Databases for

Hyperscale (Citus)

Azure Cosmos DB

Azure Kubernetes Service

Azure VMs on Linux

Azure OSS DBs now have

**30,000+**

customers in **100 countries**

**1 trillion**

transactions per day on Azure Cosmos DB

**32K+**

downloads of Citus Community

**>50%**

of Azure VMs run on Linux

Azure Kubernetes Service is the **fastest growing** compute service on Azure

## The momentum is multiplying

More users are taking advantage of mission-critical OSS on Azure.

## Customers accomplish more with open source on Azure

Fully-managed enterprise-grade open source Azure databases help customers focus on their business.

HSBC chose **Azure Database for MySQL** to build a mission critical business banking app.

- **1M registered users**
- **5,000 transactions per second**

Chevron migrated to **Azure Database for PostgreSQL** for improved HA/DR with cross-region read replicas.

- **Migrated 12 data environments from Oracle to Azure**

Online retailer ASOS uses **Azure Cosmos DB** to provide instant recommendations and order updates with single-digit millisecond latency to 15 M customers.

**“We chose Azure Cosmos DB because of its global distribution and ability to handle heavy seasonal bursts.”**
