

# Custom data sovereignty and data gravity requirements

## Architecture overview

Azure with Azure Stack enables organizations to make technology placement decisions based on business needs—simplifying meeting custom compliance, sovereignty, and data gravity requirements.

- 1 User enters data into Azure-based web app.
- 2 Application commits data to database over virtual network-to virtual network VPN connection to Azure Stack.
- 3 Data is stored in SQL database on virtual machine (VM).

## Azure products used in this solution

- Virtual network
- Web apps
- SQL server
- Inter VNET data transfer
