

Bring Azure data services anywhere with Azure Arc

Run Azure data services across on-premises, edge and multicloud

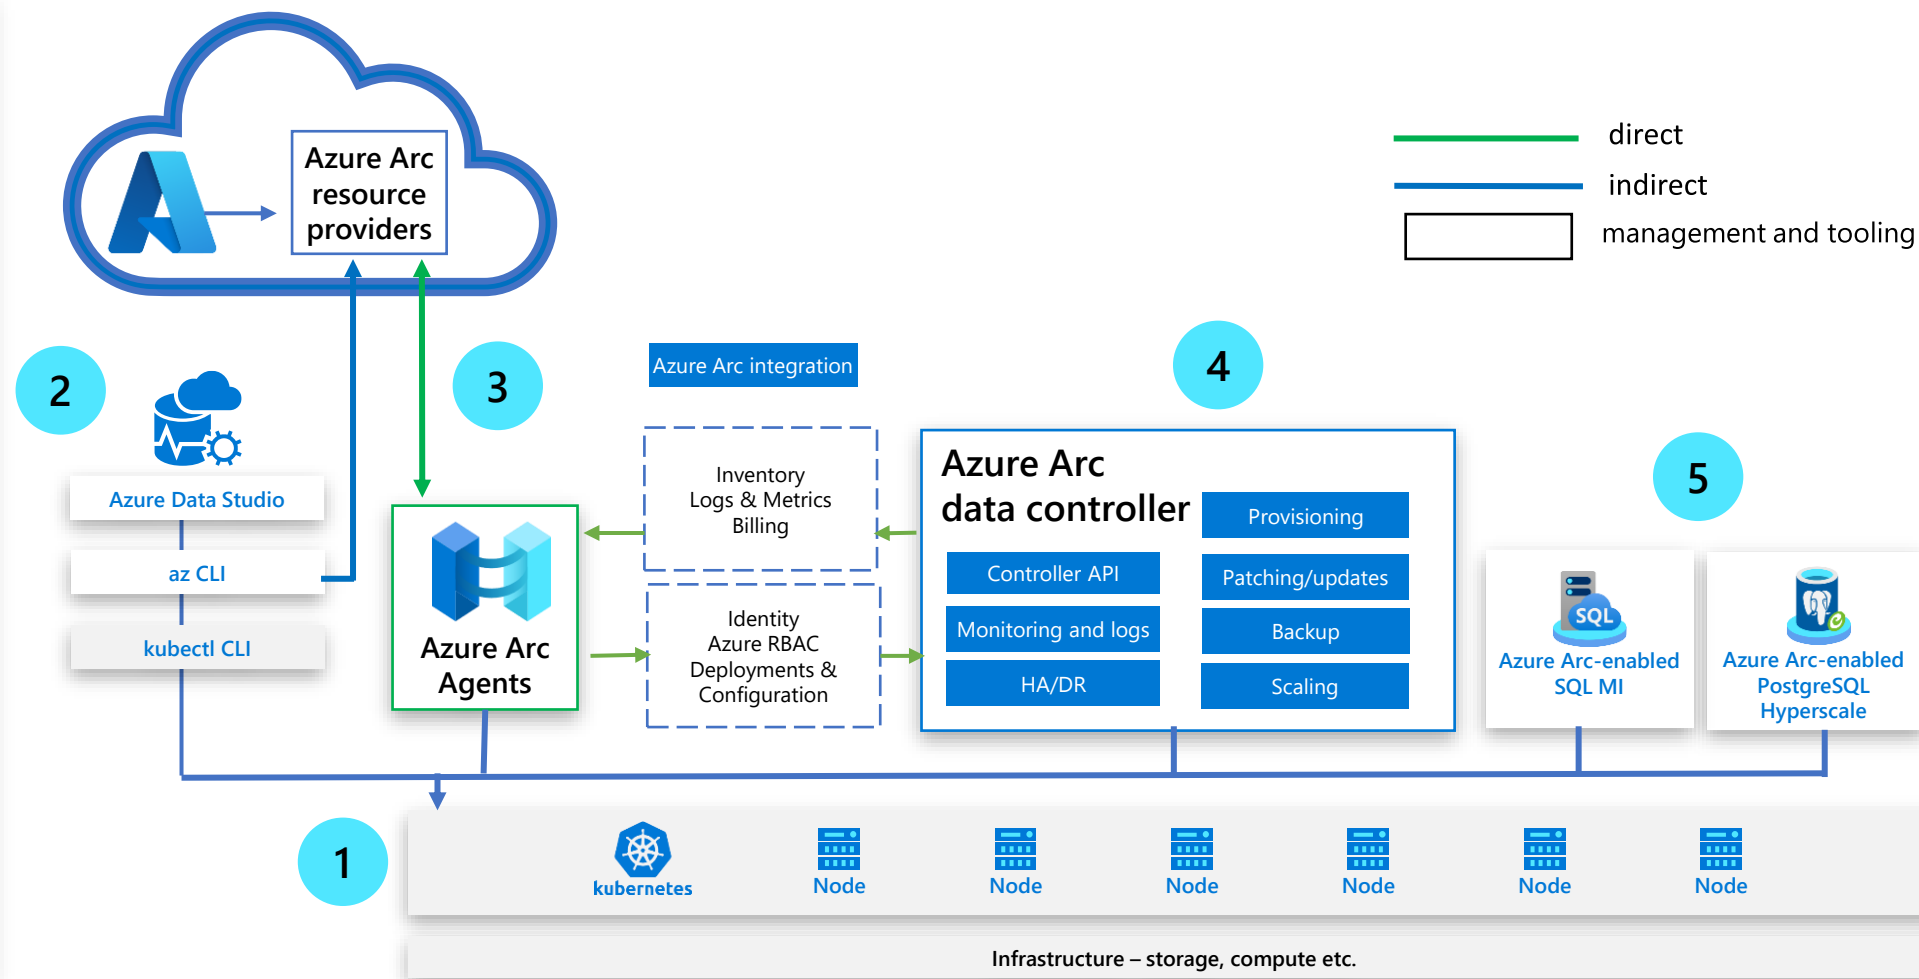

With Azure Arc, Azure data services can now run on the infrastructure of your choice. Get latest innovations like evergreen SQL and hyperscale, cloud benefits like elastic scale, automation, and cloud billing, and unified management with unmatched security across your hybrid infrastructure.

How it works: Architecture of Azure Arc-enabled data services on customer infrastructure

A few steps to get Azure data services in your environment:

- 1 Have Kubernetes on your infrastructure
- 2 Prepare environment with tools
- 3 Connect to Azure
- 4 Install Azure Arc data controller
- 5 Deploy and run the data services for your workloads
