

Bring Azure data services anywhere with Azure Arc

Run Azure data services across on-premises, edge and multi-cloud

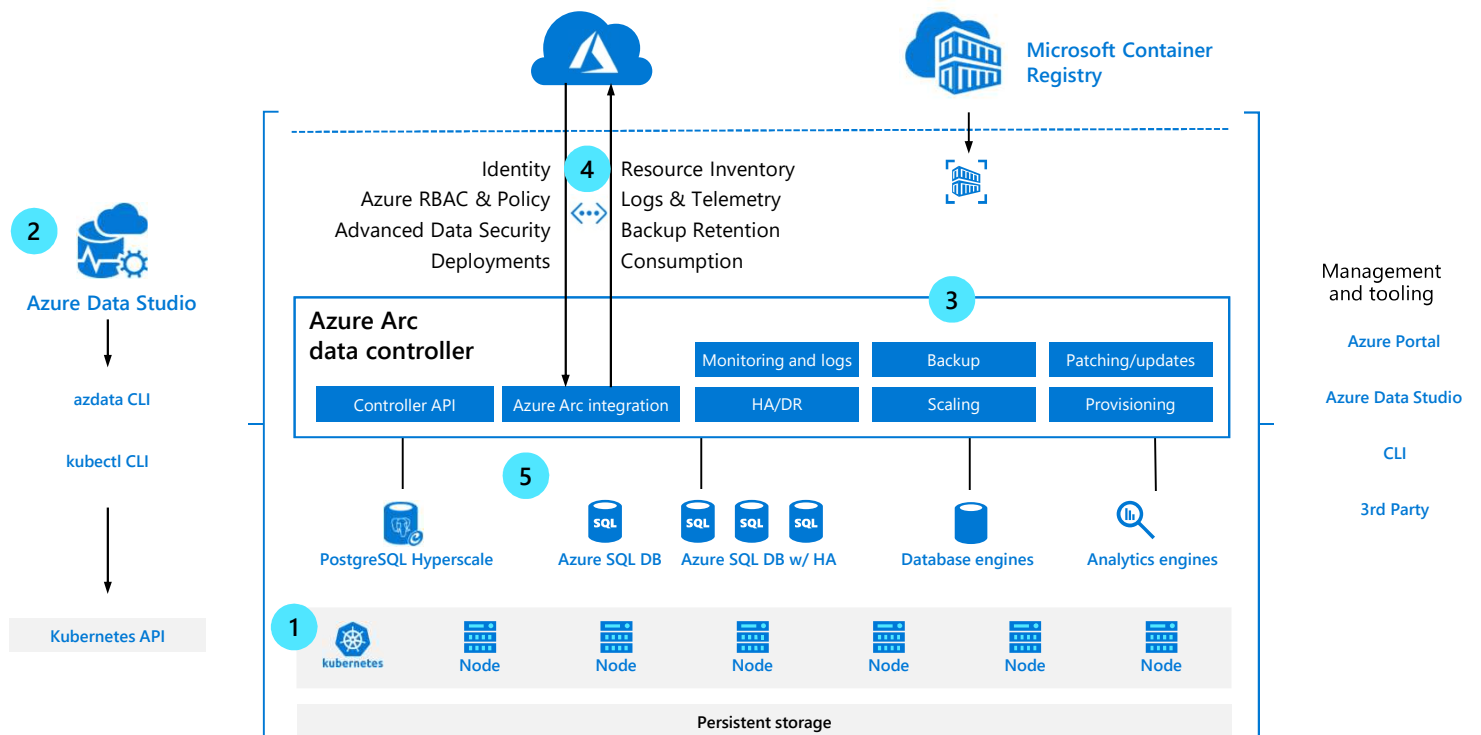

With Azure Arc, Azure data services can now run anywhere on the infrastructure of your choice. Get latest Azure innovation, cloud benefits like elastic scale and automation, unified management, and unmatched security with a modern cloud billing model.

How it works: architecture of Azure data services on customer infrastructure

A few steps to get Azure data services in your environment:

- 1 Have Kubernetes on your infrastructure
- 2 Prepare environment with APIs and CLIs
 - Azure Data Studio
 - azdata CLI
 - kubectl CLI
- 3 Install Azure Arc data controller
- 4 Connect to Azure
- 5 Deploy and run Azure data services for your workloads
